

Canadian Count Instructions

T-i^x Counting Guidelines for New and Old Bills

Your Tellermate cash counting process will remain the same with the addition of the following steps:

- The new and old bills must be separated and counted as separate denominations

Example: Count old bills on \$5 denomination, count new bills on \$5N, the same goes for 10, 10N, 20, 20N, etc...

T-i^x Counting Guidelines for \$1 & \$2 CAD Coins

\$1 CAD Coin

When counting \$1 coins

- Select the \$1 denomination
- Empty the coin cup containing the \$1 coins into another shallow container
- Place 5-7 mixed coins in the coin cup and place the coin cup on the Tellermate
- After the beep, add another 5-7 coins
- Continue to add 5-7 coins after each beep until all coins are in the coin cup on the Tellermate
- Remove the coin cup and count the next denomination

\$2 CAD Coin

When counting \$2 coins

- Select the \$2 denomination
- Empty the coin cup containing the \$2 coins into another shallow container
- Place up to 14 mixed coins in the coin cup and place the coin cup on the Tellermate
- After the beep, add up to another 14 coins
- Continue to add up to 14 coins at a time after each beep until all coins are in the coin cup on the Tellermate
- Remove the coin cup and count the next denomination

Although this process takes longer than with other coins, it still takes much less time than it takes to count the coins by hand.

Rolled Coins

Please Note: It will not be possible to weigh rolled coins of any denomination using the Full Roll count process. However, full rolls of coins can be manually entered in the Roll Review option.
